Experience

Amplify Security — Junior Software Developer | Sep 2024 – Sep 2026 | AI security platform where security engineers build custom detection agents that run against code and CI pipelines. Promoted from Intern to Junior Software Developer (Sep 2025).

- Built the first agent management experience end to end, from UI/UX to CRUD API and Postgres schema, across the web app and a TypeScript/React Ink CLI: browse, view, and edit detection agents with validation, plus a chat skill that creates agents conversationally through the same API.
- Fixed jarring chat streaming where agent events vanished mid-turn and reappeared on save, by keying live and persisted events to the same turn ID so React swapped them in place, producing one continuous conversation view.
- Implemented cancellation for in-progress LangGraph agent turns in the shared agent layer, so it worked across web and CLI, keeping checkpointed conversation state valid at every stage: preserving partial output when cancelled mid-stream and inserting a synthetic AI response when cancelled during a tool call.

MoonlightLabs — Software Developer Intern | Dec 2023 – Jun 2024 | Digital agency building enterprise web applications for clients.

- Shipped UI and data-display updates to a client's production news web app in React, Next.js, and Tailwind, including small Prisma query changes, all through the agency's code review process.

Earlier Career

- ❖ ***Carpentry & Landscaping*** — Independent Contractor | 2019 – 2023 · Completed projects for residential clients, from solo jobs to leading small crews.
- ❖ ***Upcountry Towing*** — General Manager/Co-Owner | 2013 – 2017 · Ran daily operations, negotiated contracts with roadside-assistance partners, trained dispatch and field staff.
- ❖ ***Line Cook & Catering Chef*** — Maui restaurants | 2008 – 2013 · Cross-trained on every station in upscale kitchens and ran catering for 100+ events.

Projects

Holster — cross-service streaming search and recommendations | github.com/Skye967/holster | holster.up.railway.app Aug 2026 – Present. Next.js/TypeScript, Go, Python/FastAPI, LangChain, PostgreSQL (Supabase), Docker, GitHub Actions, Claude Code.

- Designed a three-service architecture with a single exposed Go gateway enforcing auth, rate limits, and Postgres row-level security, so the LLM agent never touches user credentials.
- Built a LangChain agent that turns plain-English requests into TMDB movie API queries, personalizing picks with the user's in-app ratings and showing which of their streaming services each title is on.
- Shipped guest-first onboarding with Clerk auth, webhooks, and JWT verification; unit tests in all three languages, CI, and one-command Docker Compose bring-up.
- Ran an AI-assisted development workflow with Claude Code: wrote per-service convention files and task specs with acceptance criteria, gated every change behind an iterated code-review pass and CI, and personally reviewed and merged all 120+ commits.

TECHNICAL SKILLS

Languages:
JavaScript, TypeScript, Python, Go(Golang), HTML, CSS, SQL

Frameworks/Libraries:
React.js, Next.js, Node.js, FastAPI, LangGraph, LangChain, Apollo, GraphQL, Prisma, Tailwind, Node.js

Databases:
PostgreSQL, Supabase, Neon, Dgraph, MySQL, MongoDB, Firebase

Tools:
VScode, GitHub, Docker, Clerk, Claude, Postman, Figma, Railway, Vercel, Netlify, AWS

EDUCATION

Coding Dojo
Full Stack Development
April 2021 - August 2021
Certificate of Full Stack Development

UHMC, Maui, Hawaii
Culinary arts
January 2009 - December 2011
Associate's degree in the Culinary Arts.
