Experience

- Amplify Security — Software Developer** | Sep 2024 – Sep 2026 Application security startup.
Intern (Sep 2024 – Sep 2025), promoted to Junior Software Developer (Sep 2025). Owned features end to end: Postgres schema changes, API endpoints, and the UI.
- Agent work in LangGraph required understanding graph execution, checkpointed state, and how a turn flows through the agent, so edge cases left the conversation in a valid state.
 - Chat features depended on streaming events from the agent and reconciling live state with persisted history without visible glitches.
 - Extending the agent with LangChain tools meant understanding tool schemas, agent context, and how platform data reaches the model.
 - CLI work called for operations that behave the same whether a user or the agent invokes them.
 - Frontend work required parallel GraphQL query patterns with progressive rendering for large result sets, and deep React knowledge: custom hooks, refs, memoized callbacks, and state that survives navigation.

- MoonlightLabs — Software Developer Intern** | Dec 2023 – Jun 2024
- Built responsive UIs in Next.js, TypeScript, and Tailwind.
 - Wrote type-safe Prisma queries against Supabase Postgres and exposed them through Next.js API routes.
 - Used server-side rendering and static generation, which required understanding Next.js rendering modes and when each fits a page.

- Upcountry Towing — General Manager** | Mar 2013 – Jun 2017
- Ran daily operations and negotiated contracts with roadside assistance companies and local businesses.
 - Trained staff on dispatching, impounding, sales, repossession, and towing.

Earlier: Freelance carpentry and landscaping contractor, 100+ customer projects (2019–2023).
Catering chef at 3s Bar and Grill, 100+ events (2018–2019).

Projects

- Holster — cross-service streaming search and recommendations** | github.com/Skye967/holster | holster.up.railway.app Aug – Sep 2026. Next.js/TypeScript, Go, Python/FastAPI, LangChain, PostgreSQL (Supabase), Docker, GitHub Actions, Claude Code.
- Designed a three-service architecture with a single exposed Go gateway enforcing auth, rate limits, and Postgres row-level security, so the LLM agent never touches user credentials.
 - Built a tool-using LLM agent that turns natural-language requests into TMDB catalog queries filtered to the user's subscribed services, with in-app verdicts and watchlist as the taste signal.
 - Shipped guest-first onboarding with Clerk auth, webhooks, and JWT verification; unit tests in all three languages, CI, and one-command Docker Compose bring-up.
 - Ran an AI-assisted development workflow with Claude Code: wrote per-service convention files and task specs with acceptance criteria, gated every change behind an iterated code-review pass and CI, and personally reviewed and merged all 120+ commits.

TECHNICAL SKILLS

Languages:
JavaScript, TypeScript, Python, Go(Golang), GraphQL, HTML, CSS, SQL

Frameworks/Libraries:
React.js, Next.js, FastAPI, LangGraph, LangChain, Apollo, Prisma, Tailwind, Node.js

Databases:
PostgreSQL, Supabase, Neon, Dgraph, MySQL, MongoDB, Firebase

Tools:
VScode, GitHub, Docker, Claude, Postman, Figma, Railway, Vercel, Netlify, AWS

EDUCATION

Coding Dojo
Full Stack Development
April 2021 - August 2021
Certificate of Full Stack Development

UHMC, Maui, Hawaii
Culinary arts
January 2009 - December 2011
Associate's degree in the Culinary Arts.
